KIRAN ACADEMY

QUICKBITE

Fun + Company-Level MySQL Challenge

Role: Junior Database Developer | **Domain:** Food Delivery / Online Ordering

You have joined **QuickBite Technologies Pvt. Ltd.** as a Junior Database Developer. Analyze restaurants, cuisines, cities, ratings, prices, orders and delivery performance using MySQL.

Learning focus: CREATE DATABASE, CREATE TABLE, INSERT, SELECT, WHERE, AND, OR, NOT, BETWEEN, IN, LIKE, DISTINCT, aliases, ORDER BY, LIMIT and AVG().

1. Database Setup

```
CREATE DATABASE quickbite;
USE quickbite;

CREATE TABLE restaurants (
  restaurant_id INT PRIMARY KEY,
  restaurant_name VARCHAR(100),
  cuisine VARCHAR(50),
  city VARCHAR(50),
  rating DOUBLE,
  avg_order_value DOUBLE,
  orders_count INT,
  delivery_fee DOUBLE,
  est_delivery_time INT,
  owner_name VARCHAR(100),
  brand VARCHAR(100)
);
```

2. Restaurant Dataset — 30 Records

ID	Restaurant	Cuisine	City	Rating	Avg Order	Orders	Fee	Time	Owner	Brand
101	Spice Route	North Indian	Pune	4.5	■420	18,500	■39	32 min	Amit Sharma	Spice Route

Note: All restaurant, owner, rating, order and business values are fictional classroom/demo data.

3. ■■ LEVEL 1 — Food Detective

Task 1. Find restaurants having rating greater than 4.5.

Task 2. Find restaurants whose average order value is less than ■300.

Task 3. Find all restaurants located in Pune.

Task 4. Find restaurants having more than 20,000 orders.

Task 5. Find restaurants whose delivery time is greater than 40 minutes.

Task 6. Find restaurants whose rating is between 4.2 and 4.7.

Task 7. Find restaurants belonging to South Indian, Italian or Biryani cuisine using IN.

Task 8. Find restaurants owned by a person whose name contains 'Patil'.

Task 9. Find restaurants where brand matches the restaurant name.

Task 10. Find restaurants having delivery fee less than ■30.

4. ■ LEVEL 2 — Recommendation Team

Task 11. Find the 5 restaurants with the highest number of orders.

Task 12. Find the 5 restaurants with the lowest average order value.

Task 13. Display restaurants from highest rating to lowest rating.

Task 14. Display only unique cuisines using DISTINCT.

Task 15. Display Restaurant and Rating using aliases Restaurant_Name and Customer_Rating.

Task 16. Display restaurant name, owner and brand only.

Task 17. Sort restaurants by city and then rating descending.

Task 18. Find the 5 highest-rated restaurants with more than 10,000 orders.

Task 19. Find the 3 most ordered restaurants in Pune.

Task 20. Find the 5 restaurants with the highest delivery fee.

5. ■ LEVEL 3 — Find the Hidden Restaurants

Task 21. Find restaurant names starting with S.

Task 22. Find restaurant names ending with 'House'.

Task 23. Find restaurant names containing 'Cafe'.

Task 24. Find cuisines containing 'Indian'.

Task 25. Find restaurant names having exactly 5 characters.

Task 26. Find owners whose name contains 'Raj'.

Task 27. Find brands whose name contains 'Foods'.

Task 28. Find cities whose name starts with 'P'.

6. ■ LEVEL 4 — Business Team

Task 29. Find restaurants with average order value greater than ■400 AND rating greater than 4.5.

Task 30. Find restaurants with orders greater than 20,000 OR rating greater than 4.7.

Task 31. Find restaurants that are NOT in Pune.

Task 32. Find restaurants whose delivery time is between 25 and 40 minutes.

Task 33. Find restaurants whose average order value is between ■300 and ■600.

Task 34. Find restaurants from Pune or Mumbai.

Task 35. Find Fast Food restaurants with more than 20,000 orders.

Task 36. Find restaurants with rating greater than 4.5 and delivery fee below ■40.

Task 37. Find restaurants in Bengaluru with more than 10,000 orders.

Task 38. Find restaurants where owner name is not 'Rahul Jain'.

7. ■ LEVEL 5 — Boss Challenges

Challenge 1 — Hidden Gem

Find restaurants with rating above 4.5 but fewer than 10,000 orders.

Challenge 2 — Cheap & Popular

Find restaurants with average order value below ■300 and orders above 20,000.

Challenge 3 — Fast Delivery

Find restaurants with delivery time below 30 minutes and rating above 4.3.

Challenge 4 — Trending Restaurants

Find the 3 most ordered restaurants from Mumbai.

Challenge 5 — Premium Restaurants

Find restaurants whose average order value is greater than the average order value of all restaurants. Use AVG().

Challenge 6 — City Spotlight

Find all restaurants from Pune and sort them by orders from highest to lowest.

Challenge 7 — Cuisine Report

Find all South Indian restaurants and display restaurant, city, rating and average order value.

Challenge 8 — High Value Partners

Find restaurants where average order value is above ■500 and rating is at least 4.5.

8. ■ FINAL BOSS — CEO Challenge

QuickBite CEO wants a report of the company's strongest restaurant partners. Display restaurant name, cuisine, city, rating, average order value, orders count, delivery fee, owner and brand. Only consider restaurants with rating greater than 4.4, orders greater than 10,000, and average order value between ■300 and ■700. Sort by orders from highest to lowest and display only the top 5 restaurants.

Expected learning: Students should independently identify SELECT, WHERE, AND, BETWEEN, ORDER BY, DESC and LIMIT.

9. ■ KIRAN ACADEMY CLASSROOM COMPETITION

Stage	Tasks	Points
SQL Rookie	1–10	10
SQL Analyst	11–20	10
SQL Explorer	21–28	8
Business Analyst	29–38	10
Boss Challenges	8 challenges	16
Final Boss	1 challenge	10

Faculty Challenge Rule: For Boss Challenges and the Final Boss, give students only the business requirement. Do not tell them which SQL clauses to use. Let them identify the required concepts and build the query themselves.

10. ■ Company-Level Thinking

In a real company, SQL developers receive business questions rather than ready-made SQL clauses. For example: *“Show me the top restaurants in Pune that are highly rated, popular and reasonably priced.”* Students must translate that requirement into SQL using filtering, sorting, limits and calculations. This activity builds that problem-solving habit.
